

The usefulness of this coat rack comes to the fore especially when guests have been invited. It can be widened, practically by its standard width of 74 cm, in just two simple steps. Two precision tubes are fitted within the left and right ends of the front aluminium tube; where necessary, a gentle pull will extend these to provide an additional 30 cm of length at each end of the clothes rail. The hat shelf is made of Alucobond and offers space for hats, caps or even two to three helmets. Benefiting from a sturdy design, this practical coat rack is simple to fit where it is needed.

Dimensions of the coat rack:
width 74-134, depth 32, height 32 cm.

Coat rack made from anodised aluminium tubing, hat shelf in anodised Alucobond, supports in black plywood. We recommend that the coat rack or primary tube is affixed at a height of approx. 1.6 metres.

The central tube made of aluminium offers space for a large number of clothes hangers. With the side tubes fully extended, the hanging space of the hat rack is nearly doubled. The practical hat shelf is made of Alucobond.

The black lateral ribs constitute the central structural members. Made of plywood, they support the ends of the shelf. But they also hold the wall stays that allow the coat rack to be adjusted easily. Both ends of the coat rack can be extended continuously at the slightly enlarged stopper. The stopper also prevents clothes hangers from slipping off the rail.

A hexagon socket screw in the rib clamps the central tube and provides rigidity for the entire coat rack.

Dimensions and designs are subject to change without notice.
